Dictation, Transcription, Speech Recognition, Computer-Assisted Coding & CDI Solutions

Computer-Assisted Coding Solutions

Fusion CAC provides a path to better documentation and expert coding for smart revenue cycle management.

The Fusion Suite™

DOLBEY
SINCE 1914

What is the Fusion Suite?

The Fusion Suite is a series of healthcare software applications designed to collect robust documentation from providers, deliver better quality for patients, and optimize revenue management for the entire organization.

Dictation & Transcription, Speech Recognition, Clinical Documentation Improvement, Coding and Care Quality Management and Reporting.

Fusion CAC Computer-Assisted Coding

Not all computer-assisted coding is made equally. Dolbey's team of top industry experts work with you every step of the way to deliver results.

Fusion CAC™ is designed to enhance the manual process of coding and CDI by automating code suggestions at the point of document creation. Fusion CAC presents the coders with a list of preselected codes for verification, producing a faster process with more consistent results.

Fusion CAC can code all patient types from a single platform. The NLP software at the core of Fusion CAC is designed to code charts using the ICD-10-CM-PCS and CPT4 code sets. Coders can realize productivity increases of 25% or more. As regulatory code updates and best practices change, Fusion CAC is tuned to adapt to maintain a highly accurate outcome.

Fusion CAC was an early pioneer in computer-assisted coding with implementations producing tangible results from community hospitals to large, multi-site health systems. This combination of experience and innovation places you on the fast track towards capturing the advantage from the technology that is transforming medical coding.

Sophisticated Reporting

For many, the process of coding incorporates several systems. This leaves coding leadership with very few automated reporting tools.

With Fusion CAC, you can report on nearly every event that occurs in your coding process. This new, innovative approach to outcome analysis can lead to smarter managerial decisions regarding staff, workflow, physician documentation and revenue.

The Dashboard gives you an at-a-glance view of your backlog, completed charts and billed charts in real time. For multi-site organizations, view data from the top or focus on the detail of one hospital or one group of users. Review statistics of expected revenue daily as well as inpatient and outpatient discharges. Drill down by day, by coder or by patient account to review the history of coding events and the system's performance.

Benefits and Features

Having successfully implemented and proven the results of computer-assisted coding, Dolbey is ready to introduce you to the next generation of benefits from CAC. Innovative customers have added ideas and new functionality. Fusion CAC has proven potential to dramatically enhance the coding workflow by providing a more standardized and streamlined process enabling coders to work smarter not harder.

- **Single Platform for All Patient Types**
- **Code Suggestion Begins on 'Day One'**
- **Management Dashboard**
- **Interactive Edits**
- **Automatic Suggestion of Working DRG**
- **Flexible Automatic Workflow for Coding CDI and QA**
- **Query Opportunity Indicators**
- **Electronic Query Tools**
- **CDI Integration**
- **Concurrent Coding Ability**
- **Accepts Multiple Document Type Formats**
- **Integrates to Your Existing Encoder**

Available Encoder & Research Tools

One solution for everything your coders and CDI staff need. The available integrated encoder provides research, coding clinics, edits, groupers and more!

Now, the most experienced Computer-Assisted Coding solution has an optional built-in encoder; everything you need in one single solution for coding and CDI.

This optional feature allows for you to replace or use your existing encoder; however, the value of the encoder has quickly changed with the advent of CAC. Coders don't start with blank screens; they start with suggested codes that link into the chart documentation.

Fusion CACe™ takes this experience to the next level. Now, as coders validate the results of the CAC solution, they have real-time exposure to edits and reference material to better determine the best code selection.

Fusion CACe offers a signature Research Pane providing coders with reference material at their fingertips, further refining the coding process. This powerful tool is updated monthly to deliver the most up-to-date information for confidence in coding. Designed as a constant source of reference support without interfering in the coding process, the Research Pane provides as much or as little assistance as your coders require.

Workflow from Start to Finish

The Fusion CAC solution is working for you while the patient is still receiving care and continues working for you after final coding and billing.

Documentation Improvement

As soon as there are documents in a patient chart, Fusion CAC is already suggesting codes. CDI work queues guide your staff to the patient accounts that need their attention with an automatic, suggested working DRG.

Query physicians and append chart notes for team members all within one solution.

Coding and Analytics

As the core functionality of Fusion CAC, coders benefit from expert code suggestions on day one. Faster, more accurate coding leads to cost savings and better case mix.

Leverage the advantage of Fusion CAC's AutoClose capability to send simpler outpatient accounts straight to billing with 100% accuracy.

Quality Auditing

Meeting pre-ICD-10 productivity levels is an important goal, but achieving accuracy is an absolute requirement. Fusion CAC makes quality auditing easier than ever before. Create audit work queues based on your own custom criteria. Fusion CAC presents coded events with queries, notes, codes and documents for easy review.

Since 1914, Dolbey has been providing voice recording and document management solutions designed to help healthcare organizations improve workflow, boost productivity and increase profitability.

The Fusion Suite platform is Dolbey's line of award-winning software products that includes dictation, transcription, speech recognition, clinical documentation improvement and computer-assisted coding technologies. Together they deliver an end-to-end solution which creates more accurate reporting of critical data elements and improves documentation, reimbursement and patient care.

How can we help you?
